REACHING FOR SAFETY EXCELLENCE

Daily Safety Focus

WEEKLY HEALTH CHECK INJURY PREVENTION

How you are positioning your body when completing a task is resulting in injury. Numerous observations are being made where workers are standing on things other than work platforms. This is a high potential, at risk behavior that could result in you being seriously injured.

In order to stop injuries from happening we must take a proactive approach. We must prevent ourselves from getting hurt by controlling our hazards. One of the easiest hazards to control is where we put our bodies while completing a task. What are you standing on? Where are your hands? Could you be struck by the tool you are using? Don't put yourself in the position to be hurt, identify line of fire hazards and eliminate them.

**LEADER'S QUESTION TO WORKERS:
WHAT ARE YOU STANDING ON?**
