

# 2015 OLYMPUS

## REACHING FOR SAFETY EXCELLENCE

### Daily Safety Focus

# COMPLACENCY

The following complacent, at risk behaviors are being observed in the field:

- Not using knee pads where it could prevent wear and tear on your body.
- Not using face shields when doing impact/grinding work.
- Not waiting until traffic is stopped prior to crossing the st.
- Not practicing proper lifting techniques.
- Not wearing basic PPE.

It is easy to become complacent throughout the work day thinking about when our next day off is, how sore and tired we are etc. It is crucial that in those moments when we find ourselves day dreaming, and putting ourselves, and others at risk that we stop and re focus. We must choose to be focused and to work the safest way throughout our entire shift, ensuring we don't go into auto pilot while completing our tasks.

## LEADER'S QUESTION TO WORKERS:

Are you operating in autopilot?
