

2015 OLYMPUS

REACHING FOR SAFETY EXCELLENCE

Daily Safety Focus

UPGRADE YOUR PPE

Specialty PPE is required when a task poses higher potential for incident or injury. We empower you to go above and beyond basic PPE as you see fit for the task you are doing, even when not required.

We have had a significant increase in the number of eye injuries occurring during Olympus. We are choosing to wear what is most comfortable, or what is minimally required rather than choosing what will best protect us. If winds are high, upgrade from standard sealed eyewear to mono goggles to prevent a foreign body from entering your eye. If you are working in an area with a lot of dust/debris transition from a half mask apr with standard sealed eyewear to a full face apr so your eyes are fully protected. Use your best judgment and go above the basics when you feel it is needed to protect yourself from injury.

It's not required, is not an excuse for not protecting yourself.

LEADER'S QUESTION TO WORKERS:

What eye protection should you wear?
