REACHING FOR SAFETY EXCELLENCE

Daily Safety Focus **ARE YOU A HAZARD?**

You may be the most dangerous hazard you encounter today. Your own personal tolerance for risk could be what injures you.

Are you willing to accept poor housekeeping in your work area? Are you willing to stand on an unsafe work platform? Will you take the time to properly don and doff your PPE? Will you choose to intervene? Will you talk to your foreman if you don't feel your job is properly set up to complete safely? Will you forget to put your gloves back on, or put your face shield down? Will you hold the handrail? Are you focused?

You control your behaviors, working safely is your choice and going home safe is something you can control by making the choice to always work safe.

Mitigate the hazard of your tolerance for taking risks by not taking them. Lead by example, choose to always make working the safest way your first priority.

LEADER'S QUESTION TO WORKERS:

How are you a hazard to yourself?
