REACHING FOR SAFETY EXCELLENCE

Daily Safety Focus **DROPPED OBJECTS**

Identifying that an object has the potential to fall is key to stopping the drop. Unsecured tools and loose debris and material pose a serious hazard to anyone who may be below.

We must:

- Inspect work areas and address all housekeeping issues.
- Properly secure tools when not in use and when ascending/descending stairs and ladders.
- Ensure fire blanket is used when appropriate.
- Follow proper procedures when using hoisting tools & material.

By being proactive we can eliminate the hazard of dropped objects. You may not have put it there, but don't be the person that leaves it there.

LEADER'S QUESTION TO WORKERS:

What potential dropped objects can you identify?
