

# OLYMPUS 2015

2 SHIFTS  
INJURY  
FREE

One Goal! One Team! One Result!  
Nobody Gets Hurt!

April 2, 2015

Day 4

## Safe Access & Egress

There may be several reasons people hesitate to use handrails- but using handrails is **important to your safety** not only when going downstairs but also when going up. A miscalculation of a fraction of an inch when stepping up can send you sprawling, with painful results.

Many stairway accidents are caused when people insist on carrying a load that is too much for them to handle, or the load obscures their vision to the extent that they miss a step.

If you must carry objects up or down a stairway, the load should be small enough to allow one hand to be free to hold the railing.

Before ascending and descending, ensure that stairways are well lit and clear of debris. Any obstructions should be reported to your supervisor or cleared immediately.

Signage to hold hand rails while on stairs is not just good advice it's a requirement. Safety starts with you. Don't wait to fall to find out what could happen. Use handrails!

SAFETY HEALTH & ENVIRONMENT				
Friday @ 9am	Previous Day	Total to Date	First Aid	Record. Injury
<b>TURNAROUNDS &amp; MAJORS</b>				
# of Injuries	0	6	3	1
# of Incidents	3	22		
# Shifts Injury Free		2		
# of Observations	148	2718		

## KEY LEARNINGS

A worker in Utilities & Offsites was walking between precip buildings in plant 25-1. A gust of wind blew unknown debris into the workers eye. On the same day, the wind blew a tool crib door shut which made contact with a vehicle causing damage.

It is important to remain aware of changing environmental conditions and adjust FLRA/reassess hazards as required to prevent injury/incident from occurring.

## LEADER'S QUESTION TO WORKERS

Are you using a handrail when going up and down the stairs, if not, why?
