One Goal! One Team! One Result!
Nobody Gets Hurt!

March 30, 2015

Day 1

Safety vs. Production

“The Turnaround Management group expects all Leaders, SCL or Contractors to Execute all work safely. If that requires slowing down or stopping work to ensure the workforce has the right tools, equipment, information and PPE then that is required. Workers must also believe that they have the right to identify issues or stop work if it is not being done “the safest way.”” – Bruce Durnford, *Hydroprocessing Manager*

It is of utmost importance to everyone working at Syncrude and all of our friends and family at home that every task performed is completed safely. Take the time you need to make sure you, and those around you go home safe.

# of Observations		1833		

KEY LEARNINGS

This morning a pressure gauge was left on the deck on 8-3. A workers foot made contact with the gauge knocking it over the edge resulting in it falling approx. 20 ft. to the ground.

It is important that we all stop and take the time to address any housekeeping concerns in our work area. Make sure all tools and materials are properly stored before starting any task.

LEADER'S QUESTION TO WORKERS

Have you set yourself up for success, do you have the right tools, PPE and information to complete your task safely?
