

the Bear Facts

May 17/14
DAY

Hazard Recognition

Working safely doesn't just mean looking out for yourself. It also means looking out for your co-workers. When each person demonstrates team safety awareness, the workplace is safer for all of us. Safety is a way of life and should be thought about so often that it simply becomes second nature. Recognizing hazards is an important part of keeping you and your co-workers safe and is an essential part of doing a quality FLRA / LMRA / JHA.

Leaders: When in the field, observe and discuss with our crews their task, commend safe work behaviours and hazard recognition. If during your discussions or ours, workers have not recognized the hazards for their task, or are working unsafely, show you care by stopping to discuss their hazards recognition or work observations, coach for correction if required.

Worker: Recognize and control hazardous conditions and take action to eliminate potential workplace practices and hazardous conditions that could lead to any type of incident or loss. Intervene and help us look out for each other – show you care about others safety in a caring respectful manner; they will do the same for you. Peer to peer intervention is the highest compliment you can give someone to show you care and that you want him/her to go home to their family healthy.

The lack or misuse of personal protective equipment is a hazardous behaviour that we are seeing on many parts of TA. Does everyone on your team use the proper gear for the job, and wear it correctly? Failure to do so could impact your own safety as well as the safety of others. Ask yourself: Are you taking the time required for proper hazard recognition? Are you ensuring that everything you do is being done "The Safest Way"? Communicate with your co-workers. Tell them about potential hazards; don't ignore it. Team safety awareness helps protect everyone.

Work Together to Eliminate Hazards 24 hours a day, Everyday!
