

the Ursa Major Facts

**June 10 Night Shift
June 11 Day Shift
DAY 47**

SAFETY FOCUS: STOP & THINK

Before crossing flagging:

- No matter the level of protection, the flagging tag must always be checked because it will identify the hazard.

Correct use of flagging:

- Always use the correct level of protection depending on the hazard. It is very important to keep workers in the area safe.
- Always follow site practices regarding flagging and tagging. Use it correctly and take it down when you are done with it.

X-ray flagging must never be crossed.

Disconnecting cords inside vessels:

- Do not use cords for grinders unless the cord is identified for that use. Never unplug lights to use for anything other than lighting.

Donning & Doffing PPE:

- Use donning & doffing stations when they are available to help eliminate many of the hazards associated with removing PPE in the TA environment.

URSA MAJOR COMMUNICATION

Observed behaviours of workers progressing their tasks without fully thinking through their methods.

- Standing on a pail instead of on an approved step-up to reach work areas.
- Crawling under pipes instead of walking around.
- Standing on railing to reach higher.
- Not utilizing the safest tie-off location for fall protection.

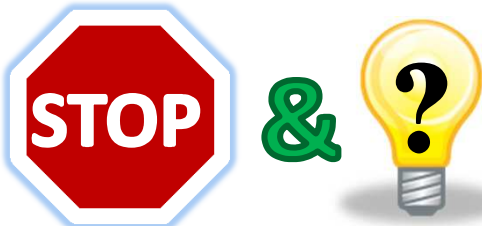

Many of these behaviours seem minor, but all could lead to incidents or injury, some serious.

Fort McMurray

Tues. Evening Mainly sunny 17°C Feels like 17	Tues. Overnight Mainly clear 7°C Feels like 6	Wed. Morning Cloudy periods 12°C Feels like 12	Wed. Afternoon Cloudy periods 21°C Feels like 21
